

Are you interested in working in Biotechnology?

Introducing MassBioEd's Biomanufacturing Technician Apprenticeship Program

MassBioEd is providing a unique opportunity to people interested in a free, accelerated training program and a paid one-year life sciences apprenticeship at a biopharmaceutical company in Massachusetts. Registered Apprenticeships offer a pathway to full-time permanent employment.

Candidates can [submit a statement of interest form here](#) to be invited to an online information session.

Biomanufacturing Technicians help deliver life changing biological products and therapies to patients. These highly skilled workers prepare materials necessary for cellular growth and production, monitor operations, and document workflows.

Biomanufacturing is dependent on multiple functional areas working together, offering BMTs an introduction to an array of subsequent career paths.

16 Weeks of Classroom Training

- Fundamentals of biology, chemistry, and math
- An overview of the science and business of drug development
- Training in vital soft skills
- Introduction to good manufacturing practice, supply chain logistics, compliance, and documentation
- Hands on laboratory training and practice

On-the-Job Training

- 12 months in a company as paid employee with company benefits
- Skills training in company's specific product line and technical requirements
- Professional and peer mentoring
- Pathway to permanent employment in a growing industry
- Satisfaction in a meaningful career
